1 Introduction

This document describes test-results of simulations with the SWAP model.

In the first chapter summaries are given in 4 tables: 1. overall performance: i) was the simulation succesfull completed, ii) was the water balance sound, iii) what was the required cpu time;

2. performance indicator 1 (PI1): in general the cumulative flux at 1 meter depth;
3. performance indicator 1 (PI2);
4. performance indicator 1 (PI3);

In the next chapters the following is reported of each case :

1. a table with a short characterisation;
2. a table with the numerical input settings;
3. a table with the results from the 3 Performace Indicators;
4. a figure with 3 pictures corresponding to the 3 performance indicators;
5. a yearly water balance of each simulated year; mass balance of water (and when relevant of solutes), if the nr of years is high then the table may be truncated.

NOTE: the tests with Macropores produce a waterbalans with a deviation that is equal to the rapid drainage.

This is due to an imcomplete postprocessing and NOT due to incorrect water balance simulations

Please verify files with extension *.blc and *.bma for detailed water balances

2 Summary

The cases were simulated using:

Swap 3.2 (revision 14) (Date 25 Sep 2008)
